

## INTERCOM / DOOR ENTRY SYSTEM –

- When you are handed keys to the apartment, please ensure that a blue round Videx entrance fob is handed over to you. This will ensure you have full access to the development via the 4G GSM door system.
- The 4G GSM door entry systems are the latest development from Videx, employing mobile phone technology to operate automatic gates, doors and remote site installations.

### How it works:

- The visitor presses the button on the external panel to call you.
- The panel, using the GSM network, dials the number stored on your phone (if there is no answer or the line is busy it will dial the next stored number) – **please ensure you have relayed your mobile number to your landlord / letting agent, together with the code on the blue Videx entrance fob so that your details may be programmed for use.**
- When the call is answered by you, speech and control options are available so you can let your visitor in and / or speak to them.
- Please contact your landlord / letting agent at the end of the tenancy to ensure that your contact details are removed from the system.

Thank you.
